

## TOPIC

**Plotting Data with Seaborn**

## SPEAKER

**Marie-Sophie von Braun**

with material from Marcelo Leomil Zoccoler

GEFÖRDERT VOM

Bundesministerium  
für Bildung  
und Forschung

SACHSEN Diese Maßnahme wird gefördert durch die Bundesregierung aufgrund eines Beschlusses des Deutschen Bundestages. Diese Maßnahme wird mitfinanziert durch Steuermittel auf der Grundlage des von den Abgeordneten des Sächsischen Landtags beschlossenen Haushaltes.

UNIVERSITÄT  
DRESDEN

UNIVERSITÄT  
LEIPZIG

# What is Seaborn?

- ▶ Powerful Python plotting library for **statistical data graphics**
- ▶ Built on top of **Matplotlib**
- ▶ Other primary libraries used by Seaborn: Numpy, Pandas, Scipy

Seaborn documentation, BSD-3-Clause License, © Copyright 2012-2024, Michael Waskom  
<https://seaborn.pydata.org/tutorial/introduction.html>

# Seaborn vs. Matplotlib

- ▶ Both Python visualization/plotting libraries
- ▶ **Matplotlib:**
  - oldest Python plotting library
  - inspired by MATLAB, grown as an open-source project
  - incredibly powerful, highly customizable
  - complex syntax, two parallel interfaces  
→ structures appear sometimes inconsistent
  - *imperative* plotting: “**how** to plot”
- ▶ **Seaborn:**
  - beginner-friendlier
  - structures appear more logical
  - built on top of Matplotlib  
→ Seaborn calls Matplotlib functions under the hood
  - *declarative* plotting: “**what** to plot”

## Examples

This page contains example plots. Click on any image to see the full image and source code.

For longer tutorials, see our tutorials page. You can also find external resources and a FAQ in our user guide.

## Lines, bars and markers

# Why Seaborn?

- ▶ Provides a **high-level API** (Application Programming Interface)  
→ user-friendly and simplified syntax, yet flexible approach
- ▶ **Automates** functionalities  
→ beginner-friendly
- ▶ Integrates **closely with pandas**  
→ intuitive visualization of complex data structures
- ▶ Aggregates **statistical features**  
→ uncover underlying patterns and relationships for statistical analysis
- ▶ Provides a variety of **built-in themes** and color palettes  
→ beautiful plots with minimal code

# Basic Seaborn figure-level functions

## Relational `sns.relplot()`

default

`kind="scatter"`

`kind="line"`

## Distributions `sns.displot()`

default

`kind="hist"`

`kind="ecdf"`

`kde=True`

`rug=True`

## Categorical `sns.catplot()`

default

`kind="strip"`

`kind="swarm"`

`kind="box"`

`kind="violin"`

`kind="point"`

`kind="bar"`

`kind="count"`

```
sns.relplot(data=my_df, # Name of the pandas DataFrame
            x="col1",    # Column in my_df to be plotted on x-axis
            y="col2",    # Column in my_df to be plotted on y-axis
            kind="line", # Type of relational plot
            ...=...,     # Further argument if needed
            ...=...)     # Further argument if needed
```

# Where to get help when you're lost?

- ▶ **Don't panic**, everyone gets stuck!
- ▶ Have a look at the **documentation** of the library  
→ <https://seaborn.pydata.org/api.html>
- ▶ Untangle your **error message**  
→ long error message ≠ big problem!
- ▶ **Google** your problem / error message  
→ the coder community is huge, e.g.,  **stackoverflow**  
→ someone has certainly encountered the same issue
- ▶ Ask **ChatGPT**, it's good at coding!  
→ tell what you want to achieve in which programming language  
→ prompt your code and your error message
